

LP / NAP AND PORT ALIGNMENT REPORT

Duplicate Port Assignments and Incomplete LCP/NAP Records

Report Date: July 5, 2026 • Source: technical_details v2 extract • Classification: Internal

1. Purpose

This report consolidates subscriber records flagged during the audit of LP (LCP), NAP, and port assignments in the subscriber database. Multiple accounts were found mapped to the same LP–NAP–Port combination ("duplicate porting"), while other records have missing or inconsistent LCP/NAP details. Since each NAP port can physically serve only one drop, these duplicates indicate either encoding errors in the database or undocumented port transfers in the field. This document serves as the working reference for field verification and database correction, and for realignment of subscriber-to-port mapping.

2. Summary of Findings

Metric	Value
Total flagged records	223
Duplicate LCP–NAP–Port assignments	188 records across 94 port locations
Incomplete LCP/NAP records	35 records
Distribution points (LPs) affected	46 LPs
Most affected LP	LP 025 (9 duplicate records, incl. one port with 3 subscribers)
Installation date range	Jul 2021 – Jun 2026

2.1 Duplicate records by year of installation

Year installed	2021	2022	2023	2024	2025	2026
Duplicate records	6	10	31	34	51	56

The volume of newly created duplicate records has increased year on year, with 2025 and 2026 accounting for more than half of all flagged accounts (107 of 188). This suggests the issue is ongoing at the point of encoding during activation, not just legacy data.

3. Key Observations

- **Duplicate porting** — 93 ports carry exactly two subscriber accounts, and one port — LP 025 NP 04 P11 — carries three accounts (Irene David, Joshua Balite, Leonardo Marmol).
- **Username vs. record mismatch** — Several usernames encode a different LP/NAP than the assigned fields, e.g. accounts tagged LP010NP07 in the username but recorded under LP 010 NP 08, and

lp6np6p5IreneDavid recorded under LP 025 NP 04. These are strong candidates for encoding error rather than physical double-connection.

- **Internal field inconsistency** — One record under LP 025 NP 04 P11 shows an lcpnap value of LP 006 NP 06 that contradicts its own LCP/NAP fields, and account LP044NP05P09RodneyLayos is flagged as duplicate but its counterpart account does not appear in this extract — recommend re-query of LP 044 NP 05 P09.
- **Incomplete records** — 35 accounts have incomplete mapping: 20 missing LCP only, 7 missing NAP only, 7 with no LCP/NAP/port at all, and 1 with inconsistent tagging. Many usernames still carry the intended location (e.g. 100np1p2, 124np2p1, lcp143np1p12), indicating the LP value (LP 100, 124, 128, 143, 149, etc.) was simply not encoded into the LCP field.
- **Missing modem SNs** — Two duplicate-flagged accounts and one incomplete account have no modem serial number on record, which will complicate remote verification via the OLT/ONU registration list.
- **Naming convention drift** — Mixed username formats (lp1np2p10, LP002NP03P08, lp005np05p06, typo variants such as lp40np3p7 with a capital "I") make automated validation unreliable and likely contributed to duplicates slipping through.

4. Recommended Actions

1. Remote verification first: cross-check each duplicated port against the OLT ONU registration list using the modem SN to identify which account is actually live on the port. In most two-account cases, one account is expected to be an encoding error or a stale record from a transfer/repull.
2. Field validation: for ports where both ONUs appear active, dispatch field team to physically trace the drops at the NAP and confirm actual port occupancy. Prioritize LP 025, LP 006, LP 007, LP 010, LP 017, LP 040, and LP 132, which have the highest counts.
3. Database correction: reassign the incorrectly encoded account to its true LP–NAP–Port, update the lcpnap field, and correct usernames where they no longer reflect the actual assignment. Log all changes for audit trail.
4. Complete the 35 incomplete records: encode the missing LCP values (most are recoverable from the username), and schedule site verification for the 7 accounts with no LCP/NAP/port data at all.
5. Standardize the naming convention (recommend zero-padded LP###NP###P## format) and add a uniqueness constraint or validation check on the LCP+NAP+Port combination at encoding time to prevent new duplicates.
6. Re-run this audit after corrections to confirm zero remaining duplicates and closure of incomplete records.

Appendix A — Duplicate LCP–NAP–Port Assignments (188 records, 94 ports)

Records are grouped by port and listed in order of installation date (earliest first). Alternating shading separates port groups.
