How to read this manual

Web admin screens are shown in the system's default **dark theme**; the application form, the customer portal and the agent portal use their own **light theme**. Things you click or tap are named in **violet**. Button colours follow your configured colour

SYNC - Complete System Manual

2

System Overview

1 The Four Applications

SYNC is one platform delivered as four separate applications. They look different because they serve different people. The first three share one database; **Monitor** sits apart and only ever reads.

Figure 1. How the four applications fit together. The arrow under Monitor points the other way on purpose — data flows out to it, never back.

Which one do I use?

If you are...	Use	Because
A prospective customer	Application Form	The only way to submit a new application yourself
Office or billing staff	Main Web App	Everything you need, on screens built for a wide display
A technician	Mobile Application	Job orders, work orders and LCP/NAP in your pocket
An agent	Mobile Application	Balances, referrals and rewards; the web app also works
An existing customer	Mobile Application	Bills, payments and support requests
A superadmin	Main Web App	Configuration and Settings are web-only
A director or owner	Monitor	Headline figures across every company, with nothing to break

One account for three, a separate one for Monitor

Except for the public Application Form, the first three applications share the **same login** — your role decides what you see. **Monitor has its own users, roles and database**, so a Main Web App account will not open it.

2 Roles and Access

Every account carries exactly one role. The role decides which menu items appear — items you cannot use are **hidden entirely** rather than shown greyed out.

ID	Role	What it is for
1	Administrator	Day-to-day operations: billing, applications, orders, agents, inventory, logs
2	Technician	Field work — job orders, service orders, work orders, LCP/NAP
3	Customer	Their own bills, payments and support requests
4	Agent	Referrals, commission, incentives and bonus
5	InventoryStaff	Inventory and inventory categories
6	Osp	Outside plant — work orders and LCP/NAP
7	SuperAdmin	Everything, plus Configurations, Users and Settings
8	HeadTech	Technical supervision — applications, orders, locations, LCP/NAP

What each role sees in the Main Web App

Menu	Admin	Super	HeadTech	Tech	Agent	Inv	OSP	Cust
Dashboard	•	•	—	—	—	—	—	—
Monitoring	•	•	—	—	—	—	—	—

Logs	⦿	•	—	—	—	—	—	—
Settings	—	•	—	—	—	—	—	—

• full group · ⦿ some screens only · — hidden

SuperAdmin sees everything

There is no screen in the web application a SuperAdmin cannot open — see the next page for why.

Why SuperAdmin sees everything

Not because every menu entry names the role. The access check treats **role ID 7 as satisfying any "administrator" requirement**, so a SuperAdmin inherits every administrator screen *and* keeps the three groups reserved to them — Configurations, Users and Settings.

Two rows are marked 0, for opposite reasons

Administrator · Logs — five of the eight log screens; Smart OLT, Radius and System Logs are SuperAdmin-only. **HeadTech · Configurations** — only Location, LCP and NAP out of seventeen.

Customers get no web menu at all

The sidebar returns nothing for the Customer role. Customers are served entirely by the Mobile Application (section 17), which is why their column is empty rather than showing Billing.

Groups are gated as a whole

A menu group is checked **before** its contents. If the group's own permissions exclude your role, the group disappears **together with every screen inside it** — even screens that would have allowed you.

The clearest example

HeadTech is allowed on the **Customer** screen, but Customer lives inside **Billing**, and Billing is gated to Administrator. So HeadTech sees no Billing group and cannot reach Customer from the menu at all.

Custom roles

The eight roles above are **locked** — their menus are fixed. Any role created beyond them behaves differently:

Role type	How its menu is decided
Locked (IDs 1–8)	By the fixed rules in the matrix opposite
Custom (any other ID)	By an explicit permissions list naming each screen the role may open. Groups appear only if at least one of their children is permitted.

A custom role with an empty permissions list sees nothing

Failing closed is deliberate. When you create a custom role, grant its screens explicitly — it will not inherit anything.

A missing menu item is a role problem, not a fault

Check the role first. A role change takes effect only after the user **signs out and back in**, because the menu is built at sign-in.

3 Signing In

- 1 Open the application — the Main Web App address in a browser, or the Mobile Application on your device.
- 2 Enter your **account number, username or email address** and your **password**.
- 3 Select **Sign In**.
- 4 You land on the home screen for your role — see the table below.

Where each role lands

Role	Home screen
Administrator / SuperAdmin	Dashboard
Agent	Agent Dashboard
Customer	Customer Dashboard (mobile)
Technician / OSP / HeadTech	Their first permitted operations screen

Figure 2. The sign-in screen.

Themes and colours

Web admin screens default to a **dark theme**; you can switch to light. Accent colours come from the **colour palette** configured in Settings, so buttons and highlights may not match the violet used in this manual.

Signing out

Use the account menu in the header on the web, or **Menu** on mobile. Signing out is required for a **role change** to take effect.

Applying does not need an account

The public Application Form is open to anyone with the link. An account is created later, by staff, once the application is approved and the customer is onboarded.

Forgotten password

There is no self-service reset. Ask a superadmin to set a new password from **Users → Users Management**.

The Application Form

4 What the Application Form Is

The Application Form is the **public front door**. A prospective customer opens a link, fills in three short steps, uploads their documents and submits. The application then appears in the Main Web App under **Application** for staff to review.

SYNC
Apply for an internet connection

1 Contact Info 2 Installation Address 3 Plan & Documents

First Name *
Enter your first name

Last Name *
Enter your last name

Mobile Number *
09*****

Alternate Number
09*****

< Back Next >

Figure 3. The Application Form on step 1; the progress bar fills as each step is completed. Colours are set per brand in the Edit panel — this shows a light configuration, but the shipped default is a dark background with white text.

How it behaves

Behaviour	Detail
No login	Anyone with the link can apply
Step-by-step	Each step is validated before Next will move on
Go back freely	Back keeps everything already entered
Branded	Name, colours and text come from the form builder (section 6)
Terms required	Terms and privacy must be accepted before submitting

Where the application goes

Straight into **Main Web App → Application**. Nothing else is needed from the applicant — see section 19 for the full journey from application to a billed customer.

5 The Three Application Steps

Step 1 — Contact Info

Who the applicant is and how to reach them: first and last name, email address, mobile number and an optional alternate number. Mobile numbers use the local 09***** format.

Step 2 — Installation Address

Where the connection goes. The address is chosen from linked dropdowns so it always matches a real serviceable location:

Field	Notes
Region	Choose first — it filters the next list
City / Municipality	Only cities in the chosen region appear
Barangay	Only barangays in the chosen city appear
House / Unit & Street	Typed in full
Landmark	Helps the installation team find the property
Map location	Pin the exact spot; search by place name is available

Work top to bottom

Region, city and barangay depend on each other. Changing the region clears the two below it, so fill them in order rather than jumping around.

Step 3 — Plan & Documents

The applicant picks a **plan**, optionally a **promo**, names who referred them (*None / Walk-in* if nobody), answers any extra questions, and uploads five documents.

Upload	Required
Proof of Billing	Yes
Government Valid ID (Primary)	Yes
Government Valid ID (Secondary)	Yes
House Front Picture	Yes
Promo Proof Document	Only with a promo

The screenshot shows the Step 3 application form. It includes the following sections:

- Select Plan ***: A dropdown menu with the text "Select plan ▾".
- Promo**: A dropdown menu with the text "None ▾".
- Referred By**: A dropdown menu with the text "None / Walk-in".
- Document Uploads**: Four dashed boxes for uploading documents, each with a document icon and a label: "Proof of Billing", "Valid ID (Primary)", "Valid ID (Secondary)", and "House Front".
- Terms and Privacy Policy**: A checkbox labeled "I accept the Terms and Privacy Policy".
- Submit**: A purple button with the text "Submit".

Figure 4. Step 3.

Referred By decides agent commission

If a customer was brought in by an agent, that agent's name must be entered here. It is what links the resulting job order to their commission — see section 11.

6 The Staff Area and Form Builder

The Application Form has a small staff area behind its own login. It is not a reporting screen — there are no charts or counts. **What you see is the live public form itself**, with a bar across the top and an **Edit** panel you can open to restyle it without a developer.

The screenshot shows the 'Ampere CBMS' staff area. At the top right, it says 'Welcome, admin'. Below this is an 'Edit' panel with a green 'Save' button. The 'Edit' panel contains fields for 'Brand Name' (with a placeholder 'Enter brand name'), 'Logo' (with a dashed box placeholder 'LOGO'), 'Background Color' (with a value of '#1a1a1a'), 'Button Color' (with a value of '#3B82F6'), and 'Text Color' (with a value of '#FFFFFF'). There are also 'Layout' options: 'Original Layout' (selected with a checkmark) and 'Multi-Step Layout'. Below the 'Edit' panel is a dark bar with the text 'The live form, exactly as the public sees it' and 'Editable in place · fields not required for staff'.

Figure 5. The staff area — brand bar on top, the **Edit** panel with its green **Save**, and the live form beneath it.

What the Edit panel changes

Setting	Effect on the public form
Brand Name · Logo	The name in the top bar and on the form, and the image above it
Background · Button · Text Color	Hex colours for the page, the buttons and the body text. Defaults are #1a1a1a , #3B82F6 and #FFFFFF — i.e. dark by default .
Terms and Conditions Privacy Policy	The full text behind each link on the form
Contact Information	Shown to applicants who need help
Layout	Original Layout — one long page with every field · Multi-Step Layout — the three-step wizard from section 5

Changes are live immediately

There is no draft or preview stage. Whatever you save is what the next applicant sees — so check your colours are readable before saving, on a phone as well as a desktop.

Staff can submit on someone's behalf

In the staff area the form's fields are **not enforced as required**, so an application can be entered from a phone call without every document to hand. The public form still requires them.

The Main Web App

7 The Standard Screen

Nearly every list in the Main Web App — customers, job orders, applications, transactions, logs — uses the **same layout**. Learn it here and the rest of Part III is just what is different.

The screenshot shows a web application interface for a list of records. It features a dark-themed sidebar on the left with a 'FILTERS' section (1) containing date range pickers (2026-07-01 to 2026-08-01) and quick filters (All Records, Active, Pending, Cancelled) with live counts. The main area has a search bar (2) and a toolbar (3) with '+ Add', column visibility, export, and refresh icons. Below is a sortable table (4) with columns ID, Name, Address, Status, and Updated. The table contains four rows of data. At the bottom, there is a pagination section (6) showing 'Show 50 entries · Showing 1 to 4 of 248 results' and 'Page 1 of 5'. Numbered callouts 1 through 6 are placed around the interface to identify these components.

ID ▲	Name	Address	Status	Updated
1042	Ramon Villanueva	Brgy. San Isidro, Cavite	ACTIVE	08/01/26
1041	Grace Bautista	Brgy. Poblacion, Cavite	PENDING	08/01/26
1040	Miguel Torres	Brgy. Mabini, Laguna	ACTIVE	07/31/26
1039	Elena Ramos	Brgy. Sto. Niño, Cavite	CANCELLED	07/30/26

Figure 6. The standard screen: 1 filter panel 2 search 3 toolbar 4 sortable table 5 quick filters 6 pagination.

Part	What it does
1 · Filter panel	Date range plus quick filters. Drag its right edge to resize.
2 · Search	Matches across every field in the row, ignoring spaces
3 · Toolbar	Add, column visibility, export and refresh
4 · Table	Click a heading to sort; click a row to open its detail panel
5 · Quick filters	One-click status filters with live counts
6 · Pagination	10, 25, 50, 100 or 200 rows — 50 by default

Everything you can do to a table

Action	How
Sort	Click a column heading. Click again to reverse. An arrow marks the sorted column.
Reorder columns	Drag a heading sideways and drop it. Your order is remembered next time you open the screen.
Resize a column	Drag the thin handle on the right edge of a heading.
Show / hide columns	Open the columns menu and tick or untick. Select All and Deselect All sit at the top.
Filter by date	Set From and To in the filter panel; Clear appears once either is set.
Search	Type in the search box — it filters instantly.
Export	The download icon exports what you can currently see.
Open a record	Click the row. A detail panel opens with arrows to step to the previous or next record.
Refresh	The circular-arrow icon re-checks for new data without reloading the page.

Export follows your layout

Hidden columns are left out and your column order is kept. Set the table up the way you want it *before* exporting. Operational screens export to **CSV**; agent and report screens export to **PDF**.

Column layouts live in your browser

Your ordering and widths are stored locally. A different browser, device or profile starts from the default layout — they do not follow your account.

Reading status badges

Colour	Generally means
Green	Good — active, done, paid, collected
Amber	Waiting — pending, in progress, partial
Red	Attention — failed, cancelled, overdue, disconnected
Blue	Informational — references, identifiers, links
Grey / italic	Nothing recorded yet

A dash and "n/a" are not the same

A dash (—) means no value has been recorded. **n/a** means the field does not apply to that record — which is correct, not missing data.

8 Dashboard and Monitoring

Dashboard

The landing screen for administrators and superadmins. It is an **operational health** dashboard rather than a financial one: the state of the four integrations, then support, visit, job-order and application activity.

Figure 7. The Dashboard — four integration-status tiles above the support, visit, job-order and application panels.

Panel	Shows
RADIUS API Connection Mikrotik RouterOS Service SmartOLT API Connection GPON Management Cloud	The four integration status tiles — whether subscriber authentication, the router service, optical equipment management and the GPON cloud are each reachable
Support Monthly Summary	Support volume over the month
Support Concern Analytics	Concerns broken down by type
Repair Category distribution	What is actually being repaired
Support Status Today · For Visit Today	Today's support and visit workload
Job Order Onsite Status	Where today's installations have reached
Application Status	Applications by stage

If a tile reads "Connection failed. System is offline."

That integration is unreachable, not broken data. Check the matching configuration screen and its log (section 13). **"Unable to fetch dashboard metrics."** means the dashboard itself could not load.

Monitoring

A live view of the network and subscriber connection state, for administrators and superadmins. Use it to see which accounts are currently online, **restricted** or **disconnected**, and to spot problems before customers call.

Use it to...	Notes
Check who is online	Live connection state per subscriber
Find restricted accounts	Usually the result of overdue billing
Find disconnected accounts	Cross-check with Disconnected Logs
Save a view	Frequently used filters can be saved as a named template

Monitoring answers "is it us or them?"

Before dispatching a technician, check whether the account shows as restricted — a billing restriction looks exactly like an outage to the customer, but is fixed at a desk rather than on a ladder.

9 Billing

The largest group in the system — eleven screens covering the whole money cycle, from the customer record through invoicing, collection, and the consequences of non-payment.

Screen	What it is for
Customer	The master subscriber list — accounts, plans, addresses, balances and status. The starting point for most billing questions.
Transaction List	Every payment recorded by staff, with method, reference and OR number
Revert Requests	Requests to reverse a transaction, for review and approval
Payment Portal	Payments made online by customers themselves
Statements	Statements of account (SOA) — generate and reissue
Invoice	Individual invoices raised against accounts
Overdue	Accounts past their due date — the working list for collections
SO Charge	Charges arising from service orders
DC Notice	Disconnection notices issued to overdue accounts
Rebates	Credits applied to accounts, individually or in bulk
Discounts	Discounts applied to accounts

The billing cycle

Stage	Screen	What happens
1 Bill	Statements · Invoice	Charges are raised against the account for the period
2 Collect	Transaction List · Payment Portal	Payment arrives at the counter or online and is recorded
3 Chase	Overdue · DC Notice	Unpaid accounts are listed, then formally noticed
4 Enforce	Monitoring · Disconnected Logs	Service is restricted or disconnected
5 Restore	Reconnection Logs	Payment clears and service is restored
6 Adjust	Rebates · Discounts · Revert Requests	Corrections and goodwill credits are applied

Reverting a payment is a two-person job

Staff raise a request; it appears in [Revert Requests](#) for an administrator or superadmin to approve. This is deliberate — it stops a single person both taking and unwinding a payment.

The Customer screen

The most-used screen in the system. It follows the standard layout from section 7, with quick filters down the side for status and billing status.

Column	Meaning
Account No.	The subscriber's unique account number
Full Name	Account holder
Address	Installation address
Contact Number · Email	How to reach them
Status	Whether the account is active
Billing Status	Whether they are paid up, overdue or restricted
Date Installed	When service began

- 1 Open **Billing → Customer**.
- 2 Search by name, account number or address.
- 3 Click the row to open the detail panel — plan, balance, history and linked records.
- 4 Use the arrows in the panel to step through neighbouring customers without going back to the list.

Recording a payment

- 1 Open **Billing → Transaction List**.
- 2 Select **+ Add**.
- 3 Choose the account, the payment method and the amount.
- 4 Enter the reference and OR number, then save.

The payment appears against the customer immediately and feeds the Manual Transaction and Combined Transactions reports (section 15).

Working the overdue list

- 1 Open **Billing → Overdue** and set a date range if you want a specific period.
- 2 Work down the list — the oldest debt usually sorts to the top.
- 3 Issue notices from **DC Notice** where required.
- 4 Check **Monitoring** to confirm whether service has already been restricted.

Rebates versus Discounts

A **rebate** credits an account for something that went wrong, such as an outage. A **discount** reduces what is charged going forward. Using the right one keeps your revenue reporting honest.

10 Applications and Orders

This is the delivery side of the business: an application becomes a job order, the job order becomes an installed customer, and later work is handled as service or work orders.

Application					
			Search...		  
Timestamp	Customer Name	Mobile Number	Address	Plan	Status
08/01/26 09:12	Ramon Villanueva	0917***4482	Brgy. San Isidro, Cavite	Fiber 100	PENDING
08/01/26 08:40	Grace Bautista	0918***1120	Brgy. Poblacion, Cavite	Fiber 50	SCHEDULED
07/31/26 16:05	Miguel Torres	0995***7731	Brgy. Mabini, Laguna	Fiber 200	CONFIRMED
07/31/26 11:22	Elena Ramos	0921***9043	Brgy. Sto. Niño, Cavite	Fiber 100	CANCELLED
Show 50 entries · Showing 1 to 4 of 132 results					
Page 1 of 3					

Figure 8. Application Management — everything submitted through the Application Form lands here.

Application Management

Every Application Form submission arrives here for review. Click a row to see the applicant's full details and their five uploaded documents, then approve, decline or schedule a visit.

Column	Meaning
Timestamp	When the application was submitted
Customer Name	First, middle initial and last name as entered
Email · Mobile Number	Contact details from step 1
Address	Installation address from step 2
Status	Where the application has reached — see below

The five application statuses

Status	Meaning
Pending	Submitted and waiting to be reviewed
Scheduled	Accepted and booked in for a visit
Confirmed	Verified and progressing to installation
Cancelled	Not going ahead
Duplicate	The same applicant already exists — closed without processing

Check the documents before approving

Proof of billing, two IDs and a house-front picture are attached to every application. Approving without opening them is the most common cause of a failed installation visit.

The three kinds of order

Order	Raised for	Who works it
Job Order	A new installation from an approved application	Administrator, HeadTech, Technician, Agent
Service Order	Work on an existing subscriber — repairs, relocations, upgrades	Administrator, HeadTech, Technician
Work Order	General and outside-plant work not tied to one subscriber	Administrator, HeadTech, Agent, OSP

Job Order columns

Column	Meaning
Timestamp	When the job order was created
Full Name of Client	The subscriber being installed
Full Address of Client	Where the installation happens
Referred By	The agent who brought the customer in — this drives commission
Assigned Tech	Who is doing the work
Onsite Status	In Progress, Done, Failed or Reschedule
Billing Status	Whether the installation has been billed
Date Installed	Set when the job is completed

Onsite Status drives more than it looks

Marking a job order **Done** credits the referring agent's commission, counts toward their 30-referral milestone and feeds the Job Order report. Marking it done early distorts all three.

LCP/NAP Location

The physical network map — where the local convergence points and network access points are, and which ports are free. Technicians and OSP staff use it to decide where a new connection can be terminated.

Screen	Purpose
LCP/NAP Location	Map and list of physical locations
LCP (Configurations)	Maintain the list of local convergence points
NAP (Configurations)	Maintain network access points and their port counts

Check port availability before scheduling

A job order scheduled into a full NAP will fail on site. Confirm there is a free port at the nearest NAP first — it is a five-second check that saves a wasted visit.

11 Agent

Agents refer customers and earn from them. This group organises agents into teams, tracks what each has earned, and records what you pay them.

Screen	What you use it for
Pay Out/In	The full ledger — commission, incentive and bonus history across all agents
Team Agents	Create, rename and delete agent teams; record a commission payout
Agent Management	The agent user accounts people sign in with
Agent Payout	Each agent's live balances side by side, and paying them out

The four balances

Balance	How it is earned	How it is paid
Commission	Automatically, when a referred job order is completed	Commission Payout, or Agent Payout
Incentives	Automatically, when the agent reaches a quota	Agent Payout → Incentives
Bonus	Credited as a bonus	Agent Payout → Bonus
Achievement	Claimed by the agent after 30 onboarded referrals (₱1,500)	Included in All Balance

Paying an agent

- 1 Open [Agent → Agent Payout](#) and select the agent.
- 2 Read their three balance cards — Balance, Incentives and Bonus.
- 3 Select **+ Add**.
- 4 Choose the **payout type**: Commission, Incentives, Bonus or All Balance. The amount is pre-filled with that pot's balance.
- 5 Upload the **proof of payment** image and write the **remarks** — both are required.
- 6 Select **Save**. The reference number is generated for you.

Save stays disabled until five things are true

An agent is selected, the amount is above zero, the amount does not exceed the balance, a proof image is attached, and remarks are filled in. A missing proof image is the usual culprit.

Commission and incentives fill themselves

You never add them by hand — the system credits them from completed job orders and quotas. Your job is to pay them out and keep the proof. This is why Incentives History has no Add button.

A team is not a login

Creating a team in Team Agents does not create an account. If an agent cannot sign in, check [Agent Management](#) for a user account with the Agent role.

12 Inventory and Expenses

Inventory

Stock control for the equipment you install and issue — routers, ONUs, cable, connectors and tools. Available to administrators and inventory staff.

Screen	Purpose
Inventory	The stock list — items, quantities and movements
Inventory Category List	The categories items are grouped under

- 1 Create your categories first in [Inventory Category List](#).
- 2 Add items under [Inventory](#), assigning each to a category.
- 3 Search the stock list at any time with the search box.

Inventory movements feed the Inventory report

Stock issued and received is recorded as a movement, which is what the scheduled **Inventory** report reads. Keeping movements accurate is what makes that report worth sending.

Expenses

Operational spending, kept separate from customer billing so that revenue and cost never mix. Available to administrators and superadmins.

Screen	Purpose
Expenses	Individual expense records — what was spent, when and on what
Expenses Category	The categories expenses are grouped under

- 1 Set up categories in [Expenses Category](#) before recording anything.
- 2 Record each expense under [Expenses](#), choosing its category.
- 3 Use the date range in the filter panel to review a period.
- 4 Export to review the period outside the system.

Categories are worth ten minutes up front

Both Inventory and Expenses depend on a category list that you cannot easily reorganise later. Agree the categories with whoever reads the numbers before you start entering data.

Expenses is web-only

The mobile app exposes an **Expenses** entry under Logs for viewing, but the full Expenses and Expenses Category screens live in the web application.

13 Configurations

Seventeen screens that define how the rest of the system behaves. Almost all are **superadmin only** — Location, LCP and NAP are also open to HeadTech.

Screen	Defines
Promo	Promotional offers selectable on the application form
Plan	Service plans — the speeds and prices customers subscribe to
Location	Regions, cities and barangays you serve
LCP	Local convergence points in the fibre network
NAP	Network access points and their available ports
Usage Type	Categories of connection usage
VLAN Config	VLAN assignments for network segregation
Payment Method	The payment methods staff can select when recording a transaction
Work Category	Categories used to classify work orders
Radius Config	RADIUS authentication settings for subscriber sessions
SmartOLT Config	Connection to the SmartOLT platform for optical equipment
SMS Config	The SMS gateway credentials and sending settings
SMS Template	Reusable message templates for SMS Blast and automated messages
Email Templates	Reusable email bodies for system notifications
PPPoE Setup	PPPoE parameters for subscriber connections
Concern Config	The concern and ticket types customers can raise
Billing Configurations	Billing cycles, due dates and charge rules

Configuration changes reach everywhere at once

These screens feed the application form, the mobile app and the billing engine simultaneously. Changing a plan price or a billing rule affects live customers immediately — there is no staging step.

Set-up order for a new deployment

Several configuration screens depend on others. Working in this order avoids having to go back:

- 1 **Location** — regions, cities and barangays. Everything geographic depends on this.
- 2 **LCP**, then **NAP** — the network beneath those locations, with port counts.
- 3 **Plan** and **Promo** — what customers can buy. These appear on the Application Form.
- 4 **Payment Method** — so transactions can be recorded.
- 5 **Billing Configurations** — cycles, due dates and charge rules.
- 6 **Usage Type, VLAN, PPPoE, Radius, SmartOLT** — the technical plumbing.
- 7 **Work Category** and **Concern Config** — how work and tickets are classified.
- 8 **SMS Config, SMS Template, Email Templates** — outbound messaging.

Integration settings

Integration	What it connects to	Check its log
Radius Config	Subscriber authentication and session control	Radius Logs
SmartOLT Config	Optical line terminal management	Smart OLT Logs
SMS Config	The SMS gateway that sends messages	SMS Logs
Email Templates	Outbound notification email	Email Logs

Every integration has a matching log

When something external stops working, the paired log screen in section 14 tells you whether the message left the system — which decides whether the problem is yours or the provider's.

Templates

SMS Template and **Email Templates** hold reusable message bodies. Write them once and select them when sending an SMS Blast or when the system sends an automated notification. Keeping the wording in a template means it can be corrected in one place rather than in every message.

Test a template before a blast

Send to yourself first. An SMS Blast reaches thousands of customers and cannot be recalled once sent.

14 Users and Logs

Users — superadmin only

Screen	Purpose
Users Management	All accounts — create, edit, set roles, reset passwords
Tech Users	Technician accounts specifically
Team Agents	Agent teams (also reachable from the Agent group)

- 1 Open **Users → Users Management**.
- 2 Select **+ Add** and enter the person's name, username, email and password.
- 3 Assign the **role** — this is what decides everything they can see.
- 4 Save. Ask them to sign in and confirm they land where you expect.

Role changes need a fresh sign-in

Menus are built when someone signs in. Until they sign out and back in, a role change appears to have done nothing.

Logs

Eight read-only screens recording what the system did. They are the first place to look when something did not happen the way it should have.

Log	Records	Role
Disconnected Logs	Every disconnection, with when and why	Administrator
Reconnection Logs	Every restoration of service	Administrator
SMS Logs	Messages sent, with delivery outcome	Administrator
Email Logs	Emails sent, with delivery outcome	Administrator
Data Logs	Changes to records — the audit trail	Admin · Super
Smart OLT Logs	Exchanges with the SmartOLT platform	SuperAdmin
Radius Logs	Authentication and session activity	SuperAdmin
System Logs	Internal application events and errors	SuperAdmin

Start with the log, not the theory

"The customer never got the SMS" is answered in seconds by SMS Logs: if the message left the system the gateway is at fault; if it never appears, the problem is a template, a number or a trigger on your side.

15 Reports, SMS Blast and Settings

Reports

Scheduled reports that generate a PDF and email it to a list of recipients, on their own timetable. Available to administrators and superadmins.

Setting	Options
Report type	Manual Transaction · Payment Portal · Combined Transactions · Inventory · Job Order · Service Order · Work Order · Summary
Schedule	Every Day · Every Week · Every Month · Every 3 Months · Every Year
Reporting period	Today · Last 7 · Last 30 · Last 90 days, or custom dates
Recipients	Comma-separated; each gets their own copy with the PDF attached

- 1 Open [Reports](#) and select [+ Add](#).
- 2 Name the report, choose its type and schedule, set the period and the recipients.
- 3 Check the preview panel, then [Save](#). The first PDF is generated straight away.
- 4 Download any report's latest PDF from the [Download](#) column.

Totals are always complete

Long listings are capped at roughly 350 printed rows, but counts, subtotals and grand totals are calculated across **every** matching record.

SMS Blast

Send a message to many customers at once — outage notices, billing reminders, promotions. Administrator only. Compose from an **SMS Template**, choose who receives it, and send. Every message is recorded in [SMS Logs](#).

Settings

Superadmin only. Holds system-wide preferences including the **colour palette** that drives accent colours across the web application and the mobile app. Custom palettes can be added.

A blast cannot be recalled

Send a test to yourself first, and double-check the recipient selection. Thousands of customers may receive the message within seconds.

16 Getting Around on Mobile

The mobile app signs in against the **same system** and shows the same data. What appears depends entirely on your role.

Navigation groups

Group	Contains
Operations	Dashboard, Application, Job Order, Service Order, Work Order, LCP/NAP
Billing	Bills (customers), Overdue (administrators)
Agent	History
Inventory	Inventory, Categories
Configurations	14 setup screens
Logs	SMS, Email, File and Expenses logs
Account	Support (customers) and Menu

Everything lives behind Menu

The bottom bar shows your most-used screens. **Menu** opens the full list your role is allowed to see.

Figure 9. The mobile Menu, grouped by area.

Pull down to refresh on any list. The app keeps the last data it fetched, so a change made on the web appears only after a refresh.

What each role gets

Role	Lands on	Main screens
Customer	Customer Dashboard	Bills, payments, Support
Agent	Agent Dashboard	Balances, referrals, History
Technician	First operations screen	Job Order, Service Order, Work Order, LCP/NAP
OSP	First operations screen	Work Order, LCP/NAP
Administrator	Operations	Most screens, including Configurations and Logs

17 The Customer Portal

Customers get a small, self-service view of their own account: what they owe, how to pay it, what they have paid before, and how to ask for help.

Figure 10. The customer dashboard.

What customers can do

Screen	Purpose
Dashboard	Account name, current balance, current and upcoming plan, amount due and payment history
Bills	Statements and invoices in full
Payment Portal	Pay online; the amount is pre-filled
Support	Raise a concern, using the types set in Concern Config

Plan changes

The dashboard shows both the **Current Plan** and any **Upcoming Plan**, with the dates it **Starts** and **Expires** — so a customer can confirm a scheduled change without calling.

Paying a bill

- 1 Open the **Dashboard** and check the amount due.
- 2 Tap **Open Payment Portal**.
- 3 Confirm the amount and complete the payment.
- 4 The payment appears in **Payment History** and in staff's Payment Portal screen.

"Pending Payment Found"

Shown when a payment has been started but not completed. The customer should finish or cancel it before starting another, to avoid paying twice.

Customer payments land in a different place from counter payments

Online payments appear under **Billing → Payment Portal**; staff-recorded payments under **Transaction List**. The **Combined Transactions** report merges both.

18 Field Work and the Agent Portal

Technicians and OSP staff

The mobile app is where field work actually happens. Technicians pick up assigned orders, work them on site, and update the status before leaving the property.

Screen	On site you use it to...
Job Order	See today's installations, with the client's address and contact number
Service Order	Handle repairs and changes for existing subscribers
Work Order	Handle general and outside-plant work
LCP/NAP	Find the nearest access point and check for a free port
Inventory	Check what equipment is available

- 1 Open **Job Order** and find the job assigned to you.
- 2 Tap it to see the client's full name, address, contact number and plan.
- 3 Do the work, using **LCP/NAP** to confirm the termination point.
- 4 Update the **Onsite Status** — Done, Failed or Reschedule — before you leave.

Update the status on site, not later

Onsite Status drives customer billing, agent commission and the milestone counter. Updating it a day later means all three were wrong for a day.

Agents

Agents land on their own dashboard, built around a gradient card that **flips** between money and referrals.

Element	Shows
Card — front	Incentives, Commission, Bonus and Achievement
Card — back	In Progress, Done, Failed and Reschedule referral counts
Achievement gauge	Progress toward 30 onboarded referrals
Get Reward	Appears at 30 — claims ₱1,500
Total Balance	All four pots, with an Application Form button beside it
Cashout History	The five most recent payouts
History	Full commission, incentive and bonus history — read-only

The reward is not automatic

Nothing is credited until the agent taps **Get Reward** themselves. This is the usual explanation when an agent says a milestone reward never arrived.

Agents can refer on the spot

The **Application Form** button on the agent dashboard opens a new application without leaving the app — useful while standing in front of a prospective customer.

19 What Monitor Is

Monitor is a separate application for **top management**. Where the Main Web App exists to run the business, Monitor exists to **watch** it — headline figures, trends and comparisons, with nothing to click that could change anything.

	Main Web App	Monitor
Purpose	Run the business	Watch the business
Users	Staff, technicians, agents, customers	Management only
Database	One, read and write	Its own for users and roles, plus each monitored system read-only
Writes	Everywhere	None to any monitored system
Login	Shared with mobile	Separate — its own accounts

Why it cannot damage anything

The read-only promise is not a convention anyone has to remember. It is enforced in **three independent places**, so a mistake in one is caught by the next:

Figure 11. Three layers stand between Monitor and any change to your live data.

The third layer is the one that really counts

Layers 1 and 2 are code, and code can be changed. A **SELECT** -only database grant is what makes the guarantee real rather than aspirational — it holds even if someone edits the application.

Two screens do write — to Monitor's own database

Databases and **Users** save settings and accounts belonging to Monitor itself. Neither touches a monitored system.

20 The Twelve Monitor Screens

The navigation is in three groups: detailed **Reporting** sections, high-level **Executive** rollups, and **Settings**.

REPORTING — THE DETAIL

Screen	Answers
Subscriber Analytics	How the subscriber base is moving — growth, mix, churn
Financial	Income, expenses, net and margin, with breakdowns
Operations	Field and support activity
Tech	Technical and network-side activity
Employee	Collections and activity attributed to named staff

EXECUTIVE — THE ROLLUPS

Screen	Answers
Overview	The headline KPIs for the selected source
Operations	Field and support activity, summarised
Revenue	The collections trend over time
Financials	Income, expenses and net, with branch comparison
All Companies	Every source side by side — ignores the source switcher

SETTINGS

Screen	Purpose
Databases	Which systems the portal reads
Users	Monitor's own accounts and roles

Figure 12. Monitor's navigation, in three groups.

Two screens are called Operations

The one under **Reporting** is the detailed view; the one under **Executive** is the summarised rollup. They answer the same question at different altitudes.

21 Sources, Roles and Reading the Numbers

Sources and the source switcher

Monitor can watch **several systems at once**, even when they store their data differently. Each monitored system is a **source**, and you pick which one you are looking at from the switcher.

Not every source can answer every question

A system that records no expenses cannot show net profit or margin; one with no session table cannot show an operations view. Rather than showing zeros, **Monitor hides the sections a source cannot produce**. A menu that changes when you switch source is working correctly.

Roles

Access is granted **per section**, not per screen group. Two roles ship by default:

Role	Can open
Executive	Everything — all five Reporting sections, all five Executive rollups, and Databases . This is the administrator role.
Viewer	Subscriber Analytics, Operations, Tech, Overview and All Companies. Deliberately excludes Financial and Employee — the first exposes expense lines and payee names, the second attributes collections to named staff.

An empty permission list shows nothing

A new role starts with no access and gains it explicitly. Failing closed is deliberate: nobody should reach the revenue figures by accident.

Reading the numbers correctly

Rule	Why it matters
The current month is partial	The Revenue page compares the last two complete months, so its month-on-month figure is not distorted by a month still in progress.
Revenue excludes cancelled, voided and pending	Only payments with a recorded payment date count. This may not match a finance report prepared on a different recognition basis.
Expenses belong to a period type	A daily or weekly view counts only daily entries; monthly adds monthly ones; yearly adds yearly. This is not a rounding difference — a month's fixed costs are booked on the first, so counting every row on that date can overstate a single day by orders of magnitude.
Figures are cached	Rollups are held briefly on the server and in your browser. The refresh button bypasses both when you need the very latest.
All Companies ignores the source	It deliberately spans every source at once, so switching source does not change it.

If a figure disagrees with the operating system, check the basis first

Monitor reads the same rows but applies its own rules on dates, cancellations and expense periods. The gap is usually a definition, not a fault.

22 End-to-End Workflows

A new customer, from enquiry to first bill

#	Where	What happens
1	Application Form	Applicant completes the three steps and uploads documents. If an agent referred them, their name goes in Referred By .
2	Main Web App · Application	Staff review the details and documents, then approve.
3	Main Web App · Job Order	A job order is raised and a technician assigned.
4	Config · LCP/NAP	A free port is confirmed at the nearest NAP.
5	Mobile · Job Order	The technician installs and sets Onsite Status to Done .
6	Automatic	The referring agent's commission is credited and their milestone counter advances.
7	Main Web App · Customer	The subscriber record becomes active with a Date Installed.
8	Billing	The first statement and invoice are raised.
9	Mobile · Customer	The customer sees the bill and pays through the portal.

An overdue account, from reminder to reconnection

#	Where	What happens
1	Billing · Overdue	The account appears past its due date.
2	SMS Blast	A reminder goes out, from an SMS Template.
3	Billing · DC Notice	A formal disconnection notice is issued.
4	Monitoring	Service is restricted, then disconnected.
5	Logs · Disconnected	The disconnection is recorded with its reason.
6	Transaction List	The customer pays and the payment is recorded.
7	Logs · Reconnection	Service is restored and the restoration logged.

Paying an agent, end to end

#	Where	What happens
1	Automatic	Completed referrals credit commission; quotas credit incentives.
2	Agent · Agent Payout	Select the agent and read their three balances.
3	Payout dialog	Choose the type, confirm the amount, attach proof, write remarks.
4	Agent · Pay Out/In	The payment appears in the ledger with its reference.
5	Mobile · Agent	The agent's balance drops and the payout shows in Cashout History.

23 Troubleshooting

Access and sign-in

Problem	What to do
A menu item is missing	Items are hidden by role, not greyed out. Check the account's role.
Role changed but nothing happened	Menus are built at sign-in. Sign out and back in.
"Access Denied" screen	The role cannot open that screen. Reports needs Administrator or SuperAdmin.
Forgotten password	No self-service reset — a superadmin sets a new one in Users Management.
Agent cannot sign in	A team is not a login. Check Agent Management for an account with the Agent role.

Lists and tables

Problem	What to do
A record is missing	Clear the search, clear the date range, and check the quick filter down the side.
Column layout reset	Layouts are stored in your browser, not your account. Another device starts fresh.
Export missing columns	Export follows the on-screen layout. Re-enable the columns first.
Data looks stale	Use the refresh icon; on mobile, pull down.

Billing and payments

Problem	What to do
Payment not showing	Online payments are under Payment Portal; counter payments under Transaction List.
Customer says they paid	Check both screens, then Data Logs for the record's history.
Wrong payment recorded	Raise a revert request — an admin or superadmin approves it.
Customer offline but paid	Check Monitoring for a restriction, then Reconnection Logs.
"Pending Payment Found"	An unfinished payment. Finish or cancel it before starting another.

Orders, agents and messaging

Problem	What to do
Agent commission not credited	The job order must be Done and Referred By must name the agent.
Payout Save button disabled	Agent, amount, proof image and remarks are all required, and the amount must not exceed the balance.
Milestone reward never arrived	The agent must tap Get Reward themselves.
Installation failed on site	Check NAP port availability before scheduling.
SMS not received	SMS Logs shows whether it left the system. If it did, the gateway is at fault.
Report did not arrive	Check Last Sent, the recipient addresses, and the spam folder.
Report PDF missing rows	Expected above ~350 rows. Totals still cover every record.

Module Index A–Z

Every screen in the platform, with the section that covers it. **W** = Main Web App **M** = Mobile Application **A** = Application Form **X** = Monitor.

Page size	10/25/50/100/200

APPLICATION FORM

Step 1	Contact Info
Step 2	Installation Address
Step 3	Plan & Documents
Uploads	4 required + promo proof

AGENT BALANCES

Commission	Completed job orders
Incentives	Quota reached
Bonus	Credited
Achievement	30 referrals → ₱1,500

REPORTS

Types	8
Schedules	5
Timezone	GMT+8
PDF cap	~350 rows

MONITOR

Screens	12 in 3 groups
Roles	Executive · Viewer
Writes	None to live data
Login	Separate accounts

The five things that cause most support calls

1. A missing menu item is a role, and roles need a fresh sign-in · 2. A missing record is usually a search or date filter still applied · 3. Agent commission needs **Referred By** plus an Onsite Status of **Done** · 4. A payout will not save without a proof image and remarks · 5. Online and counter payments live on two different screens.
