

SYNC

OPERATIONS MANAGEMENT SYSTEM

OPERATIONAL HANDOVER

System Handover Document

Prepared to transfer the operational knowledge required to use and administer the deployed SYNC system, and to record its formal acceptance by the Recipient.

PREPARED FOR	
PREPARED BY	
DATE OF ISSUE	08 August 2026
DOCUMENT VERSION	1.0
DOCUMENT REFERENCE	SYNC / HO / 2026 / 01
CLASSIFICATION	Confidential

This document is issued for operational use only. It contains no source code, database structure, technical architecture or deployment material.

USING THIS DOCUMENT

Sections 1 to 5 establish what the System does, who operates it and how work passes through it. Sections 6 to 10 form the day-to-day reference for operational staff and should be kept available to them. Sections 11 to 13 address support, ownership and formal acceptance. A newly appointed administrator should read Sections 2, 4, 5 and 6 in that order, and retain Section 10 as a first-line reference.

SECTION 1

Introduction

1.1 Purpose of the Document

This document transfers the operational knowledge of the SYNC system from the Developer to the Recipient. It records what the System does, which roles operate it, how each function is used in the course of ordinary business, and what to do when the System does not behave as expected.

It is written to be used without technical background. Procedures are expressed in terms of what the operator sees on screen and the business result produced. The document is intended to remain in service as a standing reference after the handover is complete, and to serve as the basis for instructing personnel appointed later.

1.2 Scope of the Handover

The handover covers the operation and administration of the System as deployed. The following matters are within scope:

- the purpose of the System and the business functions it performs;
- a functional description of each module;
- the user roles, their responsibilities and their access boundaries;
- the standard sequence of use and the subscriber lifecycle;
- step-by-step procedures for routine operations;
- the reports available and the formats in which they are produced;
- operating requirements, known limitations and first-line troubleshooting; and
- support arrangements, escalation and formal acceptance.

1.3 Matters Expressly Excluded

The following are not included in this handover and are not disclosed by this document. This exclusion is deliberate and is addressed further in Section 12.

-
- | | |
|---|--|
| — Application source code of any kind. | — Server, hosting and network configuration. |
| — Database structure, tables and field definitions. | — Build, release and deployment procedures. |
| — Software architecture and internal design. | — Development environments and tooling. |
| — Integration and interface specifications. | — Third-party service credentials and keys. |
-

SECTION 1 CONTINUED

Audience and Objectives

1.4 Intended Audience

TABLE 1.1 — INTENDED READERSHIP

READER	INTEREST IN THIS DOCUMENT	PRINCIPAL SECTIONS
Management and system owners	Confirmation of what has been delivered and how the System supports the business.	1, 2, 7, 11 to 13
System administrators	Maintenance of user accounts, roles, service configuration and operational settings.	3, 4, 6, 9, 10
Operations and field staff	Processing of applications, orders, billing, collections and field work.	5, 6, 10
Support personnel	Answering user enquiries and resolving or escalating reported issues.	9, 10, 11

1.5 Objectives of the Operational Handover

The handover is complete when the Recipient is able to operate the System independently under normal business conditions. The following objectives define that outcome.

- 1. Establish a common understanding.** Ensure that management and operational staff hold an accurate view of the System's purpose, coverage and boundaries, so that expectations rest on what the System does rather than on assumption.
- 2. Enable independent operation.** Ensure that named personnel can perform every routine task without recourse to the Developer, including subscriber onboarding, field dispatch, billing, collection of payment and reporting.
- 3. Define accountability.** Establish which role may perform which action, so that responsibility for records, approvals and financial entries rests with identified individuals and remains traceable in the activity logs.
- 4. Standardise practice.** Provide a single agreed method for each recurring task, in order to reduce variation between staff, limit the cost of instructing replacements and keep recorded data consistent.
- 5. Clarify support boundaries.** Set out what the Recipient resolves internally, what is referred to support, and the manner in which an unresolved matter is escalated.
- 6. Record formal acceptance.** Conclude the engagement with a signed acknowledgement that the operational documentation has been received, reviewed and accepted by an authorised representative.

Milestones and Definitions

1.6 Handover Milestones

TABLE 1.2 — SEQUENCE OF THE OPERATIONAL HANDOVER

STAGE	MILESTONE	DESCRIPTION	RESPONSIBLE
1	Delivery	The System is deployed and available for live business use.	Developer
2	Documentation	This document is issued to the Recipient for review.	Developer
3	Walkthrough	A guided orientation is conducted for nominated personnel.	Both parties
4	Supervised operation	Recipient personnel operate the System with support available.	Recipient
5	Acceptance	Section 13 is signed by both parties and the handover closes.	Both parties

1.7 Definitions

The following terms are used throughout this document with the meanings given.

TABLE 1.3 — DEFINED TERMS

System, the	The SYNC operations management platform as deployed for the Recipient.
Developer, the	The party that developed and deployed the System and which retains its intellectual property.
Recipient, the	The organisation to which the operational handover is made, as named on the cover.
Module	A functional area of the System, as described in Section 3.
Role	The named set of permissions assigned to a user account, determining the modules and actions available to that user. See Section 4.
Subscriber	A customer of the Recipient holding an account on the System.
Job order	An instruction for field work arising from a new installation.
Service order	An instruction for field work arising from a subscriber-reported concern.
Work order	An instruction for internal or scheduled field work not tied to a single installation.

SECTION 2

System Overview

2.1 Description

SYNC is a centrally hosted, browser-based operations management platform for subscription-based service providers. It consolidates subscriber records, service applications, field work, billing, collections, inventory, expenses, outbound communications and management reporting into a single working environment. Access to each part of the System is governed by the role assigned to the individual user.

Records are created once and are thereafter available to every user whose role permits access, together with a dated record of amendments. This removes the need for parallel registers maintained by separate departments.

DEPLOYMENT	ACCESS MODEL	FIELD ACCESS
Centrally hosted, web based. Accessed through a standard web browser. No installation is required on individual machines.	Role-based permissions. Each user is presented only with the modules their assigned role permits. See Section 4.	Companion mobile application. Field personnel may receive and complete assigned work from a mobile device.

2.2 Overall Purpose

The System exists to carry the full service lifecycle within one platform: from the point at which a prospective subscriber applies, through site validation, installation and activation, to recurring billing, collection of payment, service requests and, where necessary, disconnection and reconnection. It thereby provides management with continuous visibility of operational and financial performance without recourse to periodic departmental reporting.

2.3 Operating Model

The following principles govern the manner in which the System is intended to be operated.

TABLE 2.1 — PRINCIPLES OF OPERATION

One record, entered once	Each subscriber, application, order and transaction exists as a single record, which departments read and amend rather than keeping registers of their own.
Access follows the role	What a user may see and do is determined by the role assigned to their account.
Amendments are recorded	Every amendment is attributed to the account that made it, with the date and time.
Billing follows configuration	Charges derive from the plan, promotion and billing rules configured for the account.

SECTION 2 CONTINUED

Business Functions

2.4 Primary Business Functions

The System performs the functions set out below. The final column refers to the module description in Section 3 in which each function is described more fully.

TABLE 2.2 — FUNCTIONS PERFORMED BY THE SYSTEM

FUNCTION	DESCRIPTION	SECTION 3 REF.
Subscriber lifecycle	Maintenance of subscriber records, plans, account status and service history.	3.3
Applications and validation	Intake of new service applications and recording of site visit outcomes.	3.4
Field operations	Assignment and completion of job, service and work orders.	3.5
Network records	Register of service locations, distribution points and port availability.	3.6
Billing and statements	Preparation and issue of statements of account and invoices.	3.7
Payments and transactions	Recording of payments received at the counter and through the portal.	3.8
Collections	Management of overdue accounts, notices, disconnection and reconnection.	3.9
Adjustments	Authorised discounts, rebates and charge adjustments.	3.10
Inventory	Custody of equipment and consumables, and issuance against field work.	3.12
Expenses and payables	Recording of operating expenditure and recurring payables.	3.13
Agent commissions	Calculation and release of commission on referred business.	3.14
Communications	Outbound notification to subscribers by message and electronic mail.	3.15
Reporting	Scheduled and on-demand reporting for management and audit.	3.16
Access control and audit	Administration of users and roles, and the record of system activity.	3.17, 3.18

SECTION 2 CONTINUED

System Context and Benefits

2.5 System Context

Figure 2.1 System context. Users work through role-based access into a single operational record, from which the documents, notices and reports used by the business are produced.

2.6 Benefits to the Recipient

Single source of record	Subscriber, billing and field data are held once. Staff no longer reconcile differing copies held by separate departments.
Shorter onboarding	An approved application passes directly to site validation, job order and activation without re-entry of the subscriber’s particulars.
Fewer entry errors	Structured forms and required fields identify omissions before a record reaches billing or the field.
Management visibility	Volumes, collections and field workload are visible without departmental reporting requests.
Traceability	Financial entries, adjustments and status changes are attributed to a user and timed.
Subscriber self-service	Subscribers view balances, settle amounts due and raise concerns without attending an office.
Consistent billing	Charges follow the configured plan, promotion and billing rules rather than individual judgement.
Reporting without effort	Recurring reports are produced and distributed on schedule.

SECTION 3

System Modules

The System comprises twenty functional modules. Each is described below by its purpose, its principal features and the roles that ordinarily use it. The modules available to any individual depend on the role assigned to that user; a module absent from one user’s menu has not been withdrawn, but lies outside the permissions of their role.

3.1 Dashboard and Key Indicators		OPERATIONS
PURPOSE	Presents a summary of current business position on entry to the System, so that the working day begins from established figures.	
MAIN FEATURES	Headline counts for subscribers, orders and collections; comparative figures across periods; items requiring attention; direct links to the module concerned.	
TYPICAL USERS	Management, Superadmin, Administrator	
3.2 Live Monitoring		OPERATIONS
PURPOSE	Provides an operational view of current workload, queues and field availability while the working day is in progress.	
MAIN FEATURES	Configurable monitoring displays; team and agent queues in detail; technician availability; trend views by day, month and year.	
TYPICAL USERS	Superadmin, Administrator, operations supervisors	
3.3 Subscriber Management		OPERATIONS
PURPOSE	Holds the master record for every subscriber, including identity, address, service plan, account status and service history.	
MAIN FEATURES	Subscriber particulars and contact details; plan, account status and service standing; linked billing, orders and payment history; attachment of supporting documents.	
TYPICAL USERS	Administrator, Head Technician, billing staff	
3.4 Application Management		OPERATIONS
PURPOSE	Records and assesses applications for new service, including the site visit that establishes whether service can be delivered to the address.	
MAIN FEATURES	Capture of application particulars; scheduling of site visits and recording of outcomes; status progression and approval decisions; conversion of an approved application to a job order.	
TYPICAL USERS	Administrator, Head Technician, Agent	
3.5 Field Operations		OPERATIONS
PURPOSE	Governs the assignment and completion of all field activity, comprising installation job orders, subscriber service orders and internal work orders.	
MAIN FEATURES	Job orders for new installations; service orders arising from reported concerns; work orders for scheduled or internal tasks; assignment, completion forms and attachment of evidence.	
TYPICAL USERS	Head Technician, Technician, OSP, Administrator	

SECTION 3 CONTINUED

Network, Billing and Collections

3.6 Network Location Records

OPERATIONS

PURPOSE	Maintains the operational register of service locations and distribution points, so that available capacity is established before service is offered to an address.
MAIN FEATURES	Service areas and location listings; distribution point and port records; port availability and assignment status; map view of recorded locations.
TYPICAL USERS	Head Technician, Technician, OSP

3.7 Billing and Statements

FINANCIAL

PURPOSE	Prepares and issues the amounts due from subscribers in accordance with the plan and billing rules configured for each account.
MAIN FEATURES	Billing generation for a period or an individual account; statements of account and invoices; itemised charges with resulting balance; printable and downloadable documents.
TYPICAL USERS	Administrator, billing staff

3.8 Payments and Transactions

FINANCIAL

PURPOSE	Records money received, whether taken at the counter or settled by the subscriber online, and maintains the register of transactions posted.
MAIN FEATURES	Posting of payments with issue of receipt; collection through the online payment portal; consolidated transaction register; reversal requests subject to approval.
TYPICAL USERS	Administrator, cashiers, Superadmin

3.9 Collections and Overdue Accounts

FINANCIAL

PURPOSE	Manages accounts in arrears, from initial reminder through notice of disconnection to subsequent reconnection on settlement.
MAIN FEATURES	Overdue listings by ageing; preparation of disconnection notices; disconnection and reconnection records; follow-up messaging to affected accounts.
TYPICAL USERS	Administrator, collections staff

3.10 Adjustments, Discounts and Rebates

FINANCIAL

PURPOSE	Records authorised variations to amounts due, held separately from ordinary billing so that every concession granted remains visible and attributable.
MAIN FEATURES	Discounts applied to accounts or plans; rebates, including application in bulk; service order charges and staggered terms; prepaid period overrides where permitted.
TYPICAL USERS	Administrator, Superadmin

SECTION 3 CONTINUED

Configuration, Stock and Expenditure

3.11 Plans, Promotions and Service Configuration

ADMINISTRATION

PURPOSE	Holds the reference data on which the remainder of the System depends. Entries here are established once and amended deliberately, since changes affect all subsequent activity.
MAIN FEATURES	Service plans and pricing; promotional offers and usage types; payment methods and work categories; billing rules and status remark lists.
TYPICAL USERS	Superadmin

3.12 Inventory Management

OPERATIONS

PURPOSE	Controls equipment and consumables held for installation and repair, and records what remains on hand.
MAIN FEATURES	Item records organised by category; stock levels and movement history; issuance against field work; visibility of items requiring replenishment.
TYPICAL USERS	Inventory Staff, Administrator

3.13 Expenses and Payables

FINANCIAL

PURPOSE	Records operating expenditure and amounts owed, so that cost is held alongside collections rather than in a separate ledger.
MAIN FEATURES	Expense entries by category; recurring monthly payables with alerts as the due date approaches; attachment of supporting documents; expense log for review and export.
TYPICAL USERS	Administrator, Superadmin, finance staff

3.14 Agents and Commissions

FINANCIAL

PURPOSE	Administers sales agents and the amounts due to them, calculated from business actually secured and completed.
MAIN FEATURES	Agent and team registers; commission accrued against referred accounts; preparation and release of payouts; treatment of incentives and bonuses.
TYPICAL USERS	Administrator, Superadmin, Agent

3.15 Communications

ADMINISTRATION

PURPOSE	Issues outbound notification to subscribers by message and electronic mail, using approved templates so that wording remains consistent.
MAIN FEATURES	Bulk messaging to selected recipient groups; reusable message and mail templates; automatic billing and notice messages; delivery logs for messages sent.
TYPICAL USERS	Administrator, Superadmin

SECTION 3 CONTINUED

Reporting, Access Control and Subscriber-Facing Modules

3.16 Reports and Scheduled Reporting

ADMINISTRATION

PURPOSE	Produces standing reports automatically on a defined schedule and distributes them to named recipients, and provides for on-demand export from the working screens.
MAIN FEATURES	Report definitions by type and period; daily, weekly, monthly, quarterly or annual runs; automatic distribution by electronic mail; dispatch history. See Section 7.
TYPICAL USERS	Management, Administrator, Superadmin

3.17 User and Role Administration

ADMINISTRATION

PURPOSE	Determines who may sign in to the System and what each user is permitted to do, including the creation of purpose-built roles for responsibilities outside the standard set.
MAIN FEATURES	User accounts with assigned roles; field technician and agent registers; custom roles with selected module access; activation and deactivation of accounts.
TYPICAL USERS	Superadmin

3.18 Activity Logs and Audit Trail

ADMINISTRATION

PURPOSE	Retains the historical record of significant system activity, establishing which user made a given change and when, without reliance on recollection.
MAIN FEATURES	Amendment history by record; disconnection and reconnection logs; message and mail dispatch logs; system activity log available to administrators.
TYPICAL USERS	Superadmin, Administrator, auditors

3.19 Subscriber Self-Service Portal

SUBSCRIBER-FACING

PURPOSE	Provides subscribers with access to their own account only. No internal or administrative part of the System is reachable from this view.
MAIN FEATURES	Current balance and account standing; bills and statement history; online settlement of amounts due; payment confirmation with reference number; own plan and service details.
TYPICAL USERS	Subscribers

3.20 Support and Concern Handling

SUBSCRIBER-FACING

PURPOSE	Provides the route by which a subscriber reports a problem, and by which the Recipient converts that report into field work with progress visible to both parties.
MAIN FEATURES	Submission of a concern from a defined list; issue of a reference number; automatic creation of a service request; status and remarks visible to the subscriber; linked site visit outcome.
TYPICAL USERS	Subscribers, support desk, Technician

NOTE ON MODULE GROUPING

Related screens are grouped together in the System menu, so several of the modules described above may appear beneath a single menu heading. Configuration modules, described at 3.11, affect all subsequent activity and are confined to the Superadmin role.

SECTION 4

User Roles

4.1 Basis of Access

Access to the System is granted by role and not by individual. The assignment of a role is accordingly the principal administrative control: it determines what a user may see, amend and approve. Roles should be reviewed whenever a member of staff changes duties, and withdrawn on the day a member of staff leaves.

Eight standard roles are provided. Further roles may be created by a Superadmin where a responsibility does not correspond to the standard set.

TABLE 4.1 — USER ROLES, RESPONSIBILITIES AND ACCESSIBLE MODULES (PART 1 OF 2)

ROLE	RESPONSIBILITIES	ACCESSIBLE MODULES
Superadmin Highest authority	Holds full authority over the System. Maintains user accounts and roles, service plans, promotions, payment methods and all operational configuration. Reviews reversal requests and system-level logs.	All modules, including user and role administration, configuration, system logs and settings.
Administrator Day-to-day operations	Conducts the business day: subscriber records, applications, billing and statements, posting of payments, collections and notices, adjustments, inventory, expenses, agent payouts and outbound messaging. This is the role held by most office personnel.	Dashboard; subscribers; applications; field operations; billing; payments; collections; inventory; expenses; communications; reports; logs.
Head Technician Field supervision	Supervises field delivery. Reviews applications and site visits, assigns job, service and work orders to technicians, maintains service location and distribution point records, and confirms completed work.	Subscribers; applications; job, service and work orders; network location records.
Technician Field execution	Carries out assigned field work. Views own job and service orders, records what was installed or repaired, notes materials consumed, captures required evidence and marks work complete.	Job orders; service orders; network location records. Limited to own assignments.
OSP / Outside Plant Network field work	Undertakes outside-plant activity. Works from work orders covering distribution infrastructure and maintains the accuracy of location and port records following physical change.	Work orders; network location records.
Inventory Staff Stock custody	Maintains the accuracy of equipment and consumable records. Records receipts and issuance, maintains item categories and identifies stock requiring replenishment.	Inventory; inventory categories.

Continued overleaf.

SECTION 4 CONTINUED

Roles and Governing Principles

TABLE 4.1 — USER ROLES, RESPONSIBILITIES AND ACCESSIBLE MODULES (PART 2 OF 2)

ROLE	RESPONSIBILITIES	ACCESSIBLE MODULES
Agent Sales and referrals	Introduces new subscribers. Submits and follows applications for referred prospects, monitors the resulting job orders and tracks commission earned on completed connections.	Job orders; work orders. Limited to own referrals.
Customer / Subscriber Self-service only	Views and settles their own account. Sees balance, bills and payment history, settles amounts due online, submits a concern and follows its progress. Holds no access to any internal screen.	Self-service portal; own bills; support concerns. Limited to own account.
Custom roles Defined as required	Additional roles created by a Superadmin for responsibilities that do not correspond to the standard set, for example a collections-only or reporting-only position. Module access is selected at the point the role is created.	Selected modules only, as defined for each role.

4.2 Principles Governing Access

The following principles should be applied whenever a role is assigned or amended.

Least access necessary	Assign the narrowest role that permits the member of staff to discharge their duties. Access granted beyond requirement is the most frequent cause of unintended amendment to live records.
Individual accounts only	Accounts must not be shared. The activity trail attributes every amendment to the account in use, and a shared account therefore removes accountability for financial entries.
Review on change of duty	Where a member of staff transfers or leaves, the account should be amended or deactivated on the same day. Dormant accounts retaining live access represent an avoidable exposure.
Separation of entry and approval	So far as staffing permits, the person who records a financial entry should not be the person who approves its reversal. The reversal request facility exists to support this separation.

SUPERADMIN ACCESS

The Superadmin role is able to amend service plans, pricing and billing rules, which affect every subscriber account. It should be restricted to the minimum number of individuals the Recipient genuinely requires, and a written record of the current holders should be maintained by management.

SECTION 5

System Workflow

5.1 Standard Sequence of Use

Every module identified in Section 3 is operated through the same sequence. The sequence is set out below, together with the effect of each step.

Figure 5.1 Standard sequence of use, from authentication to the production of output. The validation step at Step 3 returns incomplete entries to the operator before any record is committed.

SECTION 5 CONTINUED

Subscriber Lifecycle

5.2 End-to-End Lifecycle

Beyond the individual task, the System carries a subscriber through a defined lifecycle of eight stages. Each stage passes its result to the next, so that no particulars require re-entry and no step depends on a verbal handover between departments.

Figure 5.2 Subscriber lifecycle across eight stages. Stages 1 to 4 establish service; stages 5 to 8 sustain it. Non-payment is handled through the exception path shown, by the collections module described at 3.9.

5.3 Points of Departmental Handover

Application to field	An approved application becomes a job order. Field staff work from the application record itself rather than from a separate instruction.
Field to billing	A completed installation activates the account, and it is activation that begins the billing cycle. Delay in recording completion therefore delays first billing.
Support to field	A subscriber concern becomes a service order. Closing the field work closes the matter back to the subscriber without further action.

WHY THE SEQUENCE MATTERS

Each stage depends upon proper closure of the one preceding it. An installation left uncompleted in the System leaves the account inactive and therefore unbilled, notwithstanding that the subscriber already has service. Similarly, particulars omitted at application must be obtained later, ordinarily by a different member of staff. Recording the exception path is equally material: a disconnection and any subsequent reconnection maintain an accurate account history and provide collections with a defensible record.

SECTION 6

Operating Procedures

The nine procedures set out below account for substantially all routine use of the System. They are stated as numbered steps and are intended to be followed as written, so that practice remains consistent between members of staff and between shifts.

6.1 Logging In

ALL ROLES · START OF SHIFT

- 1 Open a supported browser and navigate to the System address provided by the administrator.
- 2 Enter the issued username or electronic mail address, together with the password.
- 3 Select **Login**. The credentials are verified and the session is opened.
- 4 The landing view for the role is presented: a dashboard for office roles, or the assigned work listing for field and agent roles.
- 5 Confirm that the name shown in the header is your own. If it is not, log out immediately and report the matter to the administrator.

NOTE Use only your own account. Where a password has been forgotten, or has been entered incorrectly on several occasions, request a reset from the administrator. A colleague's account must not be used.

6.2 Navigating the Workspace

ALL ROLES

- 1 Use the side menu to move between modules. Grouped entries expand to reveal the screens they contain.
- 2 Select a module to open its listing. The listing is the working set of records for that area.
- 3 Select a row to open the detail view for that record.
- 4 Use the trail at the head of the screen to return to the preceding level.
- 5 Collapse the side menu where additional width is required for a wide listing.

6.3 Searching and Filtering

ALL ROLES

- 1 Open the module in which the record is held: subscribers, applications, orders or transactions.
- 2 Enter a distinctive value in the search field, such as an account number, surname or contact number.
- 3 Narrow the result using the available filters, for example status, location or date range.
- 4 Sort by selecting a column heading where the largest, oldest or most recent entries are required first.
- 5 Clear the search and all filters before beginning an unrelated enquiry, so that a partial listing is not mistaken for a complete one.

NOTE An empty result ordinarily indicates that a filter remains applied from a previous enquiry, or that the value was recorded with a different spelling. Search a shorter fragment before concluding that the record does not exist.

SECTION 6 CONTINUED

Records and Financial Entries

6.4 Creating a Record

ADMINISTRATOR · HEAD TECHNICIAN

- 1 Open the relevant module and select the **Add** or **New** action.
- 2 Complete the form. Fields marked as required must be completed before the record can be saved.
- 3 Select from the list provided wherever one is offered, in preference to entering free text, so that reports group the entry correctly.
- 4 Attach supporting documents or photographs where the process requires them.
- 5 Review the entries and select **Save**.
- 6 Confirm the acknowledgement message and verify that the record appears in the listing.

6.5 Amending a Record

ADMINISTRATOR · SUBJECT TO ROLE

- 1 Locate the record by the method described at 6.3.
- 2 Open the record and select **Edit**.
- 3 Amend only those fields requiring correction. Leave unrelated fields undisturbed.
- 4 Where a remarks or reason field is provided, record the ground for the amendment.
- 5 Select **Save** and verify the amended values on the detail view.

NOTE Amendments are recorded against the account in use, with date and time. Correction is an expected part of ordinary operation; making it properly, with a stated reason, is what preserves the reliability of the record.

6.6 Recording a Payment

ADMINISTRATOR · CASHIER

- 1 Locate the subscriber account and confirm the name and account number with the payer.
- 2 Verify the outstanding balance shown before accepting payment.
- 3 Select the payment action and enter the amount received together with the method of payment.
- 4 Record the reference particulars for any non-cash payment.
- 5 Save the transaction and issue the receipt to the payer.
- 6 Confirm that the balance has reduced by the amount received before the payer leaves the counter.

IMPORTANT A posted transaction is a financial record and cannot be deleted. Where an entry is incorrect, submit a reversal request for approval. A second correcting payment must not be posted in its place.

SECTION 6 CONTINUED

Reporting, Notification and Closing the Session

6.7 Generating and Exporting Reports

MANAGEMENT · ADMINISTRATOR · SUPERADMIN

- 1 To export the current screen: filter the listing to the records and period required, then select **Export to CSV**. The file is downloaded to the device.
- 2 To establish a standing report: open the **Reports** module and select **Add Report**.
- 3 Give the report a name that identifies it without reference to this document, select its type, and set the period it is to cover.
- 4 Select the frequency — daily, weekly, monthly, quarterly or annual — and the time of day at which it is to run.
- 5 Enter the electronic mail addresses of the recipients.
- 6 Save. The report is thereafter produced and distributed automatically on that schedule.

NOTE Section 7 lists the report types available. The date last sent, shown on the report listing, confirms whether a scheduled report has been distributed as expected.

6.8 Viewing Notifications and Alerts

ALL INTERNAL ROLES

- 1 Observe the counters shown beside menu entries. A figure indicates items in that module awaiting attention.
- 2 Read on-screen messages before proceeding: they confirm a completed action or state why an action could not be completed.
- 3 Open the module indicated and clear the outstanding items.
- 4 Review due-date alerts, such as payables approaching their date, at the start of each working day.

6.9 Logging Out

ALL ROLES · END OF SHIFT

- 1 Complete and save any record still open. Unsaved entries are not retained.
- 2 Select **Logout** from the menu.
- 3 Confirm that the login screen is displayed before leaving the device.
- 4 On a shared or public device, close the browser in addition.

IMPORTANT A session must not be left open on an unattended machine. Any action taken within an open session is recorded against the account that opened it.

SECTION 7

Reports

7.1 Scheduled Reports

A scheduled report is defined once in the Reports module and is thereafter produced automatically and distributed by electronic mail to the recipients recorded against it. No further action is required once the definition is saved.

TABLE 7.1 — SCHEDULED REPORT TYPES

REPORT	DESCRIPTION	FORMAT
Manual Transaction	Payments recorded by staff at the counter during the period, with method, reference and the recording user.	CSV
Payment Portal	Payments settled online by subscribers through the self-service portal, with reference numbers.	CSV
Combined Transactions	Counter and portal collections in a single listing, identifying the source of each entry, with separate and combined totals.	CSV
Job Order	Installation job orders raised in the period, with assignment, status and completion particulars.	CSV
Service Order	Subscriber concerns converted to service orders, with concern type and resolution status.	CSV
Work Order	Internal and scheduled work orders, with category, assignment and completion status.	CSV
Inventory	Stock position and movement for the period, by item and category.	CSV
Summary	Consolidated management overview drawing together billing, orders, inventory and subscriber figures for the period.	CSV

SECTION 7 CONTINUED

Schedules and Administration

7.2 Available Schedules

A report definition carries one frequency. Where the same figures are required at two intervals, two definitions should be created.

TABLE 7.2 — FREQUENCY OPTIONS

FREQUENCY	PARAMETERS REQUIRED	ORDINARILY USED FOR
Every day	Time of day	Collections and transaction summaries requiring daily review.
Every week	Weekday, time of day	Field productivity and order throughput.
Every month	Day of month, time of day	Billing summaries and management reporting.
Every three months	Starting month, day, time of day	Periodic performance review.
Every year	Month, day, time of day	Year-end consolidation.
On demand	None	Immediate export of any listing from its module, without a schedule.

ADMINISTRATION OF REPORT DEFINITIONS

- Name reports so that a recipient understands the contents without opening the file, for example “Monthly Combined Collections” rather than “Report 3”.
- Keep the recipient list current. A report continues to be sent to a departed employee’s address until the definition is amended.
- Where an expected report has not arrived, check the date last sent on the report listing before concluding that the schedule is incorrectly set.

SECTION 7 CONTINUED

On-Demand Output and Distribution

7.3 On-Demand Documents and Exports

The following are produced immediately from the working screens, for an individual record or for a filtered listing, without a schedule being defined.

TABLE 7.3 — DOCUMENTS AND EXPORTS AVAILABLE ON DEMAND

OUTPUT	DESCRIPTION	FORMAT
Statement of account	Charges, payments and the resulting balance for a subscriber over a billing period.	PDF
Invoice	Amount due for a specified billing period, issued to the subscriber.	PDF
Payment receipt	Acknowledgement of payment received, bearing a reference number.	PDF
Disconnection notice	Formal notice to an account in arrears in advance of suspension of service.	PDF
Module listing exports	Any filtered listing, including subscribers, applications, orders, transactions, overdue accounts, discounts, rebates, expenses, commissions and logs, exported as displayed.	CSV
Dashboard and monitoring views	Live indicators and charts for immediate review; read on screen rather than exported.	On screen

7.4 Distribution of a Scheduled Report

Each run is recorded in the dispatch history against the report definition, which establishes whether a report was produced and when it was sent.

Figure 7.1 Lifecycle of a scheduled report, from definition to distribution.

NOTE ON FORMAT

Exported files are produced in comma-separated (CSV) format, which opens in any spreadsheet application. Recipients may therefore filter and total the figures themselves without requiring access to the System. Documents issued to subscribers are produced in PDF for printing and retention.

SECTION 8

System Requirements

The System operates entirely within a web browser. No software requires installation on individual machines and no dedicated hardware is required. The requirements below describe a working environment rather than a minimum at which the System will merely start.

8.1 Supported Browsers

TABLE 8.1 — BROWSER SUPPORT

BROWSER	VERSION	STATUS
Google Chrome	Current release, or one behind	Recommended
Microsoft Edge	Current release, or one behind	Recommended
Mozilla Firefox	Current release	Supported
Safari	Current release, macOS and iPadOS	Supported
Internet Explorer, legacy browsers	Any	Not supported; screens may not display correctly.

8.2 Operating Environment

TABLE 8.2 — CONNECTION, DISPLAY AND ANCILLARY REQUIREMENTS

Internet connection	Stable broadband required. 5 Mbps or better per concurrent user is comfortable; greater throughput assists where site photographs are uploaded.
Screen resolution	1920 × 1080 recommended, 1366 × 768 minimum. Wide listings benefit from the greater width.
Workstation	Any current desktop or laptop running Windows, macOS or Linux.
Electronic mail	A working address for each user who is to receive reports or notices.
Printing	Printer access where statements, invoices or notices are issued in hard copy.
Spreadsheet application	Required to open exported CSV files.
User account	One individual account per member of staff; accounts must not be shared.

SECTION 8 CONTINUED

Devices and Prerequisites

8.3 Device Suitability

TABLE 8.3 — SUITABILITY BY DEVICE TYPE

DEVICE	SUITABILITY	RECOMMENDED USE
Desktop or laptop	All modules, listings, dashboards and reporting screens operate as designed.	Primary working device
Tablet	Suitable for review and light entry; wide tables require horizontal scrolling.	Supervisory and review use
Mobile telephone	Not intended for extended administrative work. Field personnel should use the companion mobile application.	Field use via mobile application

8.4 Prerequisites Before First Use

The following should be in place before staff are asked to work in the System. Each is the responsibility of the Recipient.

TABLE 8.4 — READINESS CHECKLIST

NO.	PREREQUISITE	REQUIREMENT
1	System address recorded	The address at which the System is reached is documented and made available to all staff who require access.
2	Individual accounts created	One account per member of staff, each with the correct role assigned in accordance with Section 4.
3	Reference data configured	Service plans, promotions, locations, payment methods and billing rules are established as described at 3.11.
4	Support particulars displayed	The contact details recorded at Section 11 are completed and posted where staff can see them.
5	Documentation available	A copy of this document is accessible to operational staff, in print or electronically.
6	Nominated administrator	At least one member of staff is identified as internal administrator and holds the Superadmin role.

SECTION 9

Known Limitations

The matters recorded below are inherent characteristics of the manner in which the System is designed to operate. They are stated so that expectations are correctly set, and so that ordinary behaviour is not reported as a fault. Reference should be made to this section, and to Section 10, before an issue is raised.

TABLE 9.1 — OPERATIONAL LIMITATIONS

NO.	LIMITATION	EXPLANATION
1	An internet connection is required at all times	The System is centrally hosted and reached over the internet. Where connectivity is lost it cannot be used until restored; there is no offline mode, and unsaved work is not retained.
2	Access is limited by the assigned role	A module absent from one user's menu but present in another's is a matter of role assignment, not a defect. Only a Superadmin may alter what a role reaches.
3	Certain actions are restricted to senior roles	Configuration changes, role administration, amendment of plans and pricing, and reversal of transactions are confined to senior roles. Other users are not presented with these options.
4	Subscribers may view only their own account	The self-service portal is restricted to the records of the subscriber signed in. Subscribers cannot view other accounts, cannot reach any internal screen, and cannot amend their own billing records.
5	Financial entries are corrected by reversal, not deletion	Correction is effected by a reversal request requiring approval, so that the original entry and its correction both remain of record.
6	Sessions close after a period of inactivity	An idle session is ended for security reasons and the user must sign in again. Entries unsaved at that point are not preserved.
7	Message and payment delivery depend on external services	Messaging, mail and online payment confirmation rely on third-party providers. Delay at the provider may defer delivery notwithstanding that the System issued the request correctly; dispatch logs record what was sent and when.
8	Certain screens require a wider display	Listings with many columns and the monitoring views are designed for a desktop display. On smaller screens they remain usable but require scrolling.
9	This document is an operational guide only	No development, architectural or deployment material is included. It cannot be used to modify, extend or reproduce the software. See Section 12.

SECTION 10

Troubleshooting Guide

The recommended action should be carried out before a matter is escalated. Where the cause is a role restriction or a failure of connectivity, escalation will not resolve it and the answer is given below.

TABLE 10.1 — TROUBLESHOOTING REFERENCE (PART 1 OF 3): ACCESS AND DATA ENTRY

ISSUE	POSSIBLE CAUSE	RECOMMENDED ACTION
Credentials rejected at login	The username or password has been entered incorrectly, or the account has been deactivated.	Re-enter carefully, checking for capitals and trailing spaces. Where the failure persists, ask the administrator to confirm that the account is active and to reset the password.
Signed out unexpectedly	The session ended after a period of inactivity, or the connection was interrupted.	Sign in again and re-enter any unsaved work. Save at natural intervals rather than leaving a form open while attending to other matters.
A module is absent from the menu	The assigned role does not include that module.	Confirm with the administrator which role is held. Where the module is genuinely required for the user's duties, a Superadmin must amend the role assignment.
A search returns no result	A filter from an earlier enquiry remains applied, or the value is recorded with a different spelling.	Clear all filters and search again on a shorter fragment, such as part of a surname or account number.
A record will not save	A required field is empty or contains an unexpected value.	Identify the field highlighted on the form and read the message displayed. Complete the field and save again. A second copy of the form should not be opened.
Pages load slowly or incompletely	A weak or intermittent connection, or a very large unfiltered listing.	Test the connection against another site. Apply a filter or a narrower date range before loading a large listing, then refresh the page.

Continued overleaf.

SECTION 10 CONTINUED

Payments, Messaging and Reporting

TABLE 10.1 — TROUBLESHOOTING REFERENCE (PART 2 OF 3): FINANCIAL AND COMMUNICATIONS

ISSUE	POSSIBLE CAUSE	RECOMMENDED ACTION
Balance appears incorrect after payment	The payment was posted to a different account, or the amount or method was entered incorrectly.	Open the transaction register and verify the entry, account and amount. Where the entry is incorrect, raise a reversal request for approval. A second correcting payment must not be posted.
Online payment not reflected	Confirmation from the payment provider has not yet been received.	Allow a short interval and refresh. Retain the subscriber's reference number. Where the payment remains unreflected, escalate quoting that reference rather than posting a manual entry.
Subscriber did not receive a message	Incorrect contact particulars on the record, or delay at the messaging provider.	Verify the contact number or address on the subscriber record, then check the dispatch log to confirm that the message was issued. Correct the particulars and send again.
A scheduled report did not arrive	The recipient address is incorrect, the schedule has not yet fallen due, or the message was filtered as unsolicited mail.	Check the date last sent on the report definition and verify the recipient list. Ask the recipient to examine their junk mail folder.
An exported file will not open correctly	The CSV file is being opened in an application that is not a spreadsheet.	Open the file in a spreadsheet application. Where columns appear merged, use the import option and select the comma as separator.
Figures differ between two screens	Different date ranges or filters are applied to each view.	Align the period and filters on both screens before comparing. Live views and period-based reports are not expected to agree exactly.

Continued overleaf.

SECTION 10 CONTINUED

Field Work, Output and Escalation Preparation

TABLE 10.1 — TROUBLESHOOTING REFERENCE (PART 3 OF 3): FIELD WORK AND DISPLAY

ISSUE	POSSIBLE CAUSE	RECOMMENDED ACTION
Assigned field work is not visible to the technician	The order was not assigned, or was assigned to a different technician.	Have the supervisor confirm the assignment on the order record. Once assigned correctly the order appears in that technician's listing.
A printed document is cut off or misaligned	Incorrect paper size or scaling in the browser print settings.	Set the correct paper size in the print dialogue and select fit-to-page or default scaling, then preview before printing.
The screen appears unresponsive	An interrupted page load, or an action still being processed.	Wait briefly and refresh the page. Where the condition recurs, sign out, close the browser, reopen it and sign in again before escalating.
Layout appears incorrect following an update	The browser is holding an earlier cached version of the page.	Perform a forced refresh, or clear the browser cache and sign in again.

10.1 Preliminary Checks Before Escalation

FOUR CHECKS FIRST

- Is the connection working against other sites?
- Does the action require a role the user does not hold?
- Does a page refresh or a fresh sign-in clear the condition?
- Is the behaviour recorded in Section 9 as a known limitation?

INFORMATION TO PROVIDE

- The name, role and account of the user affected.
- The module and screen on which the matter arose.
- The action attempted, stated step by step.
- The exact message displayed, with date and time.
- The record reference, where one is involved.

SECTION 11

Support Information

11.1 Support Contact

The particulars below are completed at the time of handover. A copy should be displayed where all operational staff can see it.

SYNC SUPPORT DESK — FIRST POINT OF CONTACT

SUPPORT TELEPHONE	_____	SUPPORT HOURS	_____
SUPPORT MAIL ADDRESS	_____	ASSIGNED CONTACT	_____
ALTERNATE CHANNEL	_____	INTERNAL ADMINISTRATOR	_____

Requests raised outside the stated hours are attended to on the next working day, unless a separate arrangement has been agreed in writing.

11.2 Issue Reporting Process

STEP	ACTION	REQUIREMENT
1	Check first	Work through Section 10 and establish that the behaviour is not a role restriction or a failure of connectivity.
2	Raise internally	Report the matter to the Recipient’s own system administrator, who determines whether it affects one user or all users.
3	Submit with particulars	Provide the account, module, steps taken, the exact message displayed, the date and time, and any record reference.
4	Track to closure	Retain the reference issued and confirm resolution with the affected user before the matter is closed.

SECTION 11 CONTINUED

Escalation and Responsibilities

11.3 Escalation Procedure

Where a matter is not resolved at one level it is referred to the next. The level at which a matter is raised should correspond to its nature and effect.

LEVEL	REFERRED TO	MATTERS HANDLED AT THIS LEVEL
L1	Internal administrator	Access, role and user account matters, and any question answered by this document.
L2	Support desk	Functional questions and issues affecting a single user or a single record.
L3	Assigned contact	Unresolved or recurring issues, and any matter affecting several users.
L4	Management review	Interruption to business-critical operation, or any matter requiring a commercial decision.

MATTERS TO REPORT WITHOUT DELAY

The following should be referred directly to the assigned contact and should not wait in the ordinary queue: the System cannot be reached by any user; billing or collections are affected across multiple accounts; or unauthorised access to an account is suspected.

11.4 Division of Responsibility

MATTER	RESOLVED BY	NOTES
User accounts and role assignment	Recipient	Performed by the Recipient's Superadmin under Section 3.17.
Plans, promotions and billing rules	Recipient	Configured by the Recipient per its own commercial decisions.
Data entry and correction	Recipient	Including reversal of transactions posted in error.
Interpretation of this document	Recipient, then support	Referred to support only where the document does not address the question.
Functional faults in the System	Support	Reported with the particulars listed at 10.1.
Availability of the hosted service	Support	Reported without delay where no user can reach the System.

SECTION 12

Intellectual Property Notice

12.1 Notice of Ownership and Limitation of Disclosure

NOTICE

“This document is provided solely for the operational use and administration of the deployed SYNC system. It does not include the application’s source code, database schema, architecture, development assets, deployment procedures, or any proprietary technical documentation required to reproduce, replicate, or modify the software. All intellectual property rights remain with the software developer unless otherwise specified in a separate written agreement.”

12.2 Effect of the Notice

THE RECIPIENT MAY

- Operate the deployed System for its intended purpose.
- Use this document to instruct its own personnel.
- Reproduce it internally for staff reference.
- Administer users, roles and operational settings.
- Export and retain its own business data.

THIS DOCUMENT DOES NOT

- Transfer ownership of the software or any part of it.
- Grant any right to copy, adapt or resell the software.
- Provide the means to rebuild or replicate the System.
- Constitute a licence, warranty or service agreement.
- Supersede any signed agreement.

12.3 Confidentiality and Handling

Intended recipients	Circulation is limited to personnel of the Recipient who require it for their duties, and to the Recipient’s authorised advisers.
Handling	To be treated as confidential business information; not to be published or disclosed to any third party without prior written consent.
Version control	Superseded copies should be withdrawn when a later version is issued, so that staff do not follow procedures that no longer apply.

12.4 Governing Agreement

Where any statement in this document is inconsistent with a signed agreement between the parties, the signed agreement prevails. This document is issued as operational guidance and does not vary commercial terms.

SECTION 13

Handover Acceptance

13.1 Acknowledgement

By signing below, the Recipient confirms that the **SYNC — System Handover Document** has been received, reviewed and accepted, and that its contents have been explained to the extent requested. The Recipient acknowledges that this handover covers the operational use and administration of the deployed System only; that no source code, database structure, architectural material, development asset or deployment procedure forms part of it; and that all intellectual property in the software remains with the Developer as set out in Section 12.

13.2 Signatures

RECEIVED AND ACCEPTED BY	HANDED OVER BY
NAME	NAME
POSITION	POSITION
ORGANISATION	ORGANISATION
SIGNATURE	SIGNATURE
DATE	DATE

SECTION 13 CONTINUED

Witness, Particulars and Retention

13.3 Witness and Document Particulars

WITNESS (OPTIONAL)		DOCUMENT PARTICULARS	
NAME AND POSITION		DOCUMENT TITLE	SYNC — System Handover Document
SIGNATURE AND DATE		REFERENCE	SYNC / HO / 2026 / 01
		VERSION	1.0
		DATE OF ISSUE	08 August 2026
		TOTAL PAGES	34

13.4 Schedule of Items Handed Over

The items listed below constitute the operational handover. The Recipient should initial each item on receipt.

TABLE 13.1 — ITEMS COMPRISING THE HANDOVER

NO.	ITEM	DESCRIPTION	INITIALS
1	This document	SYNC — System Handover Document, version 1.0.	
2	Administrator access	Credentials for at least one nominated Superadmin account.	
3	Support particulars	Contact details, hours and escalation route recorded at Section 11.	
4	Guided walkthrough	Orientation session conducted for nominated personnel.	
5	Configured reference data	Service plans, locations, payment methods and billing rules as at the date of handover.	

RETENTION

One signed original should be retained by each party. An unsigned copy should be kept available to all operational staff for day-to-day reference, and should be replaced when a later version is issued.
